Task 1 – How to use the Rhino template

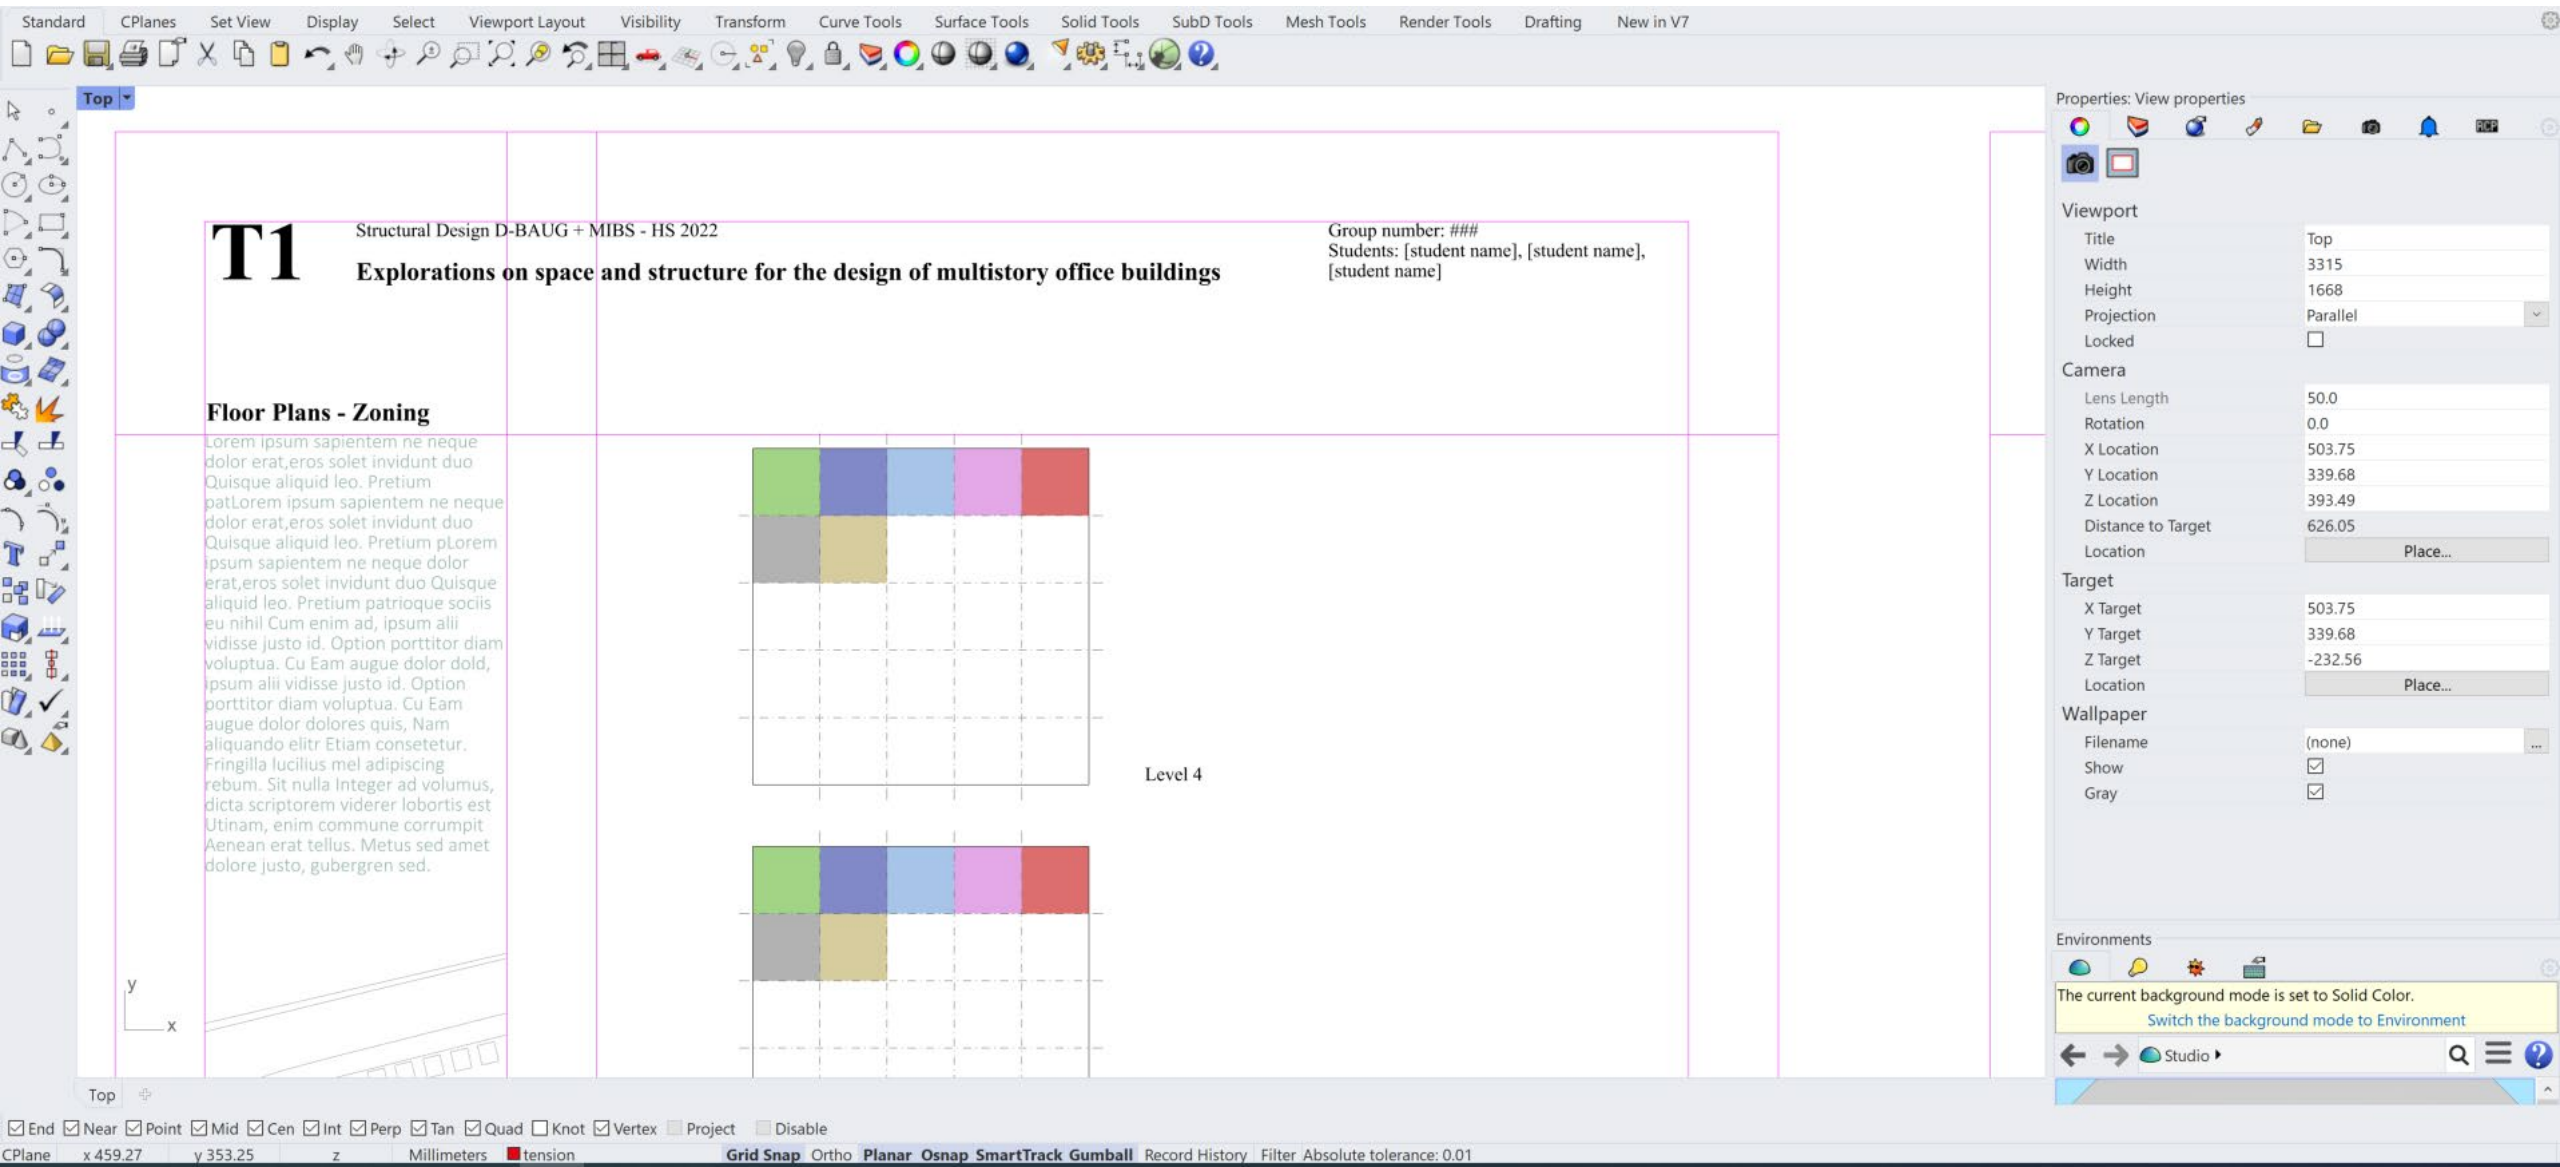

The template has 4 pages by default. If the space provided is not sufficient, it is possible to have more than 1 page for the “Design Concept” ONLY (Page 1). The green text is a placeholder and must be replaced.

Task 1 – How to use the Rhino template

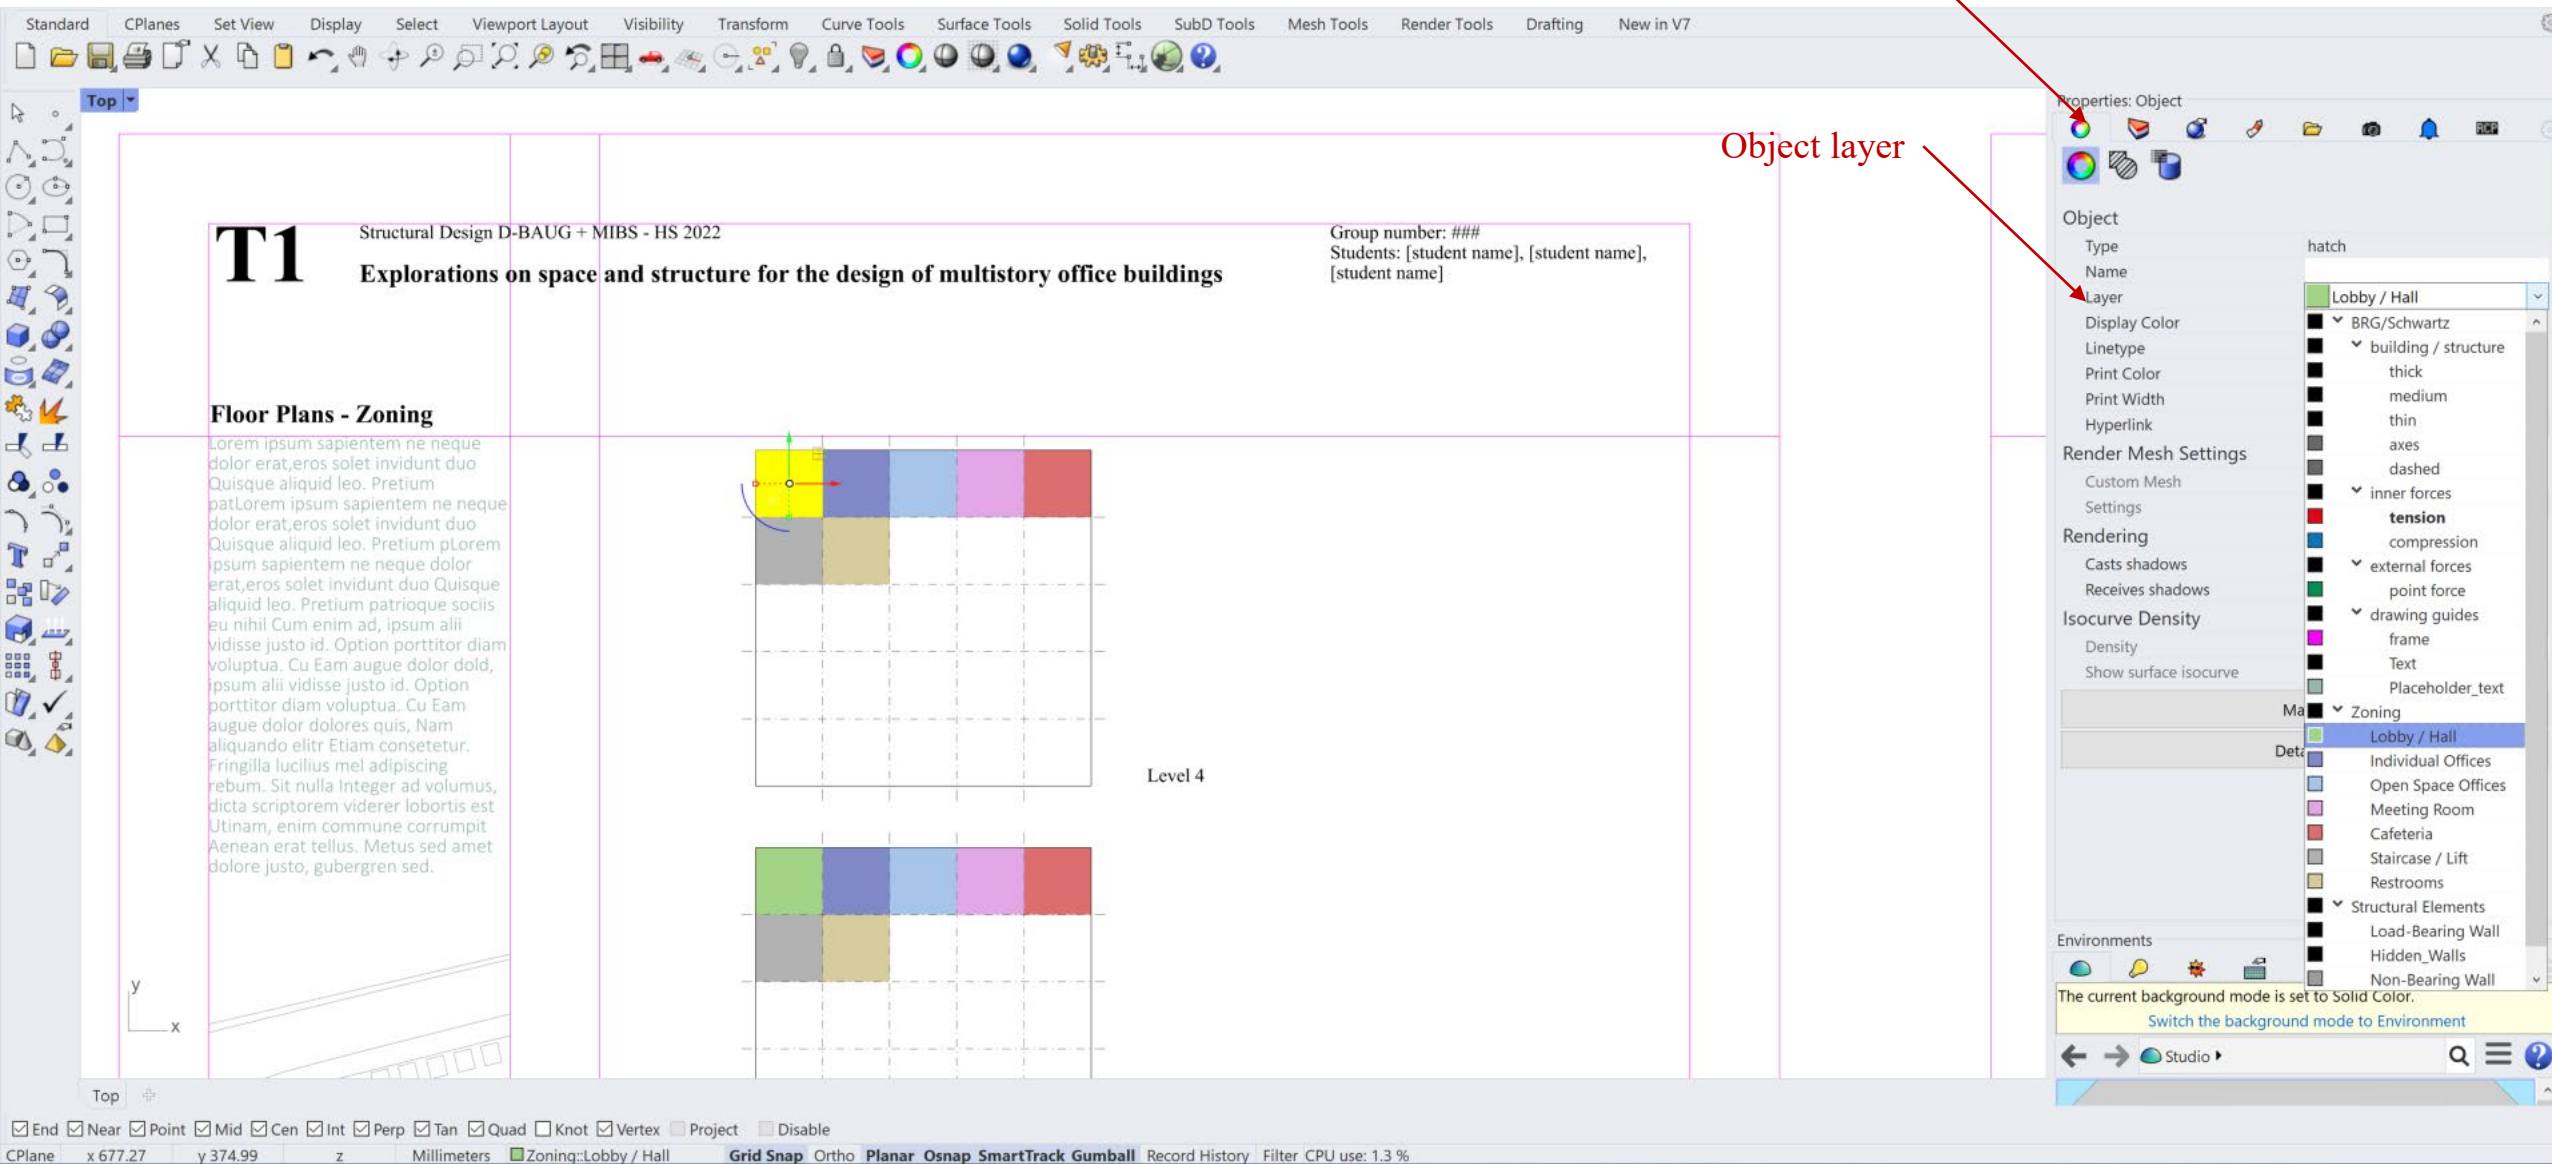

The template includes a set of layers for the different elements of the drawings. Colors, line types, and line weights are already set and should not be edited.

Task 1 – How to use the Rhino template

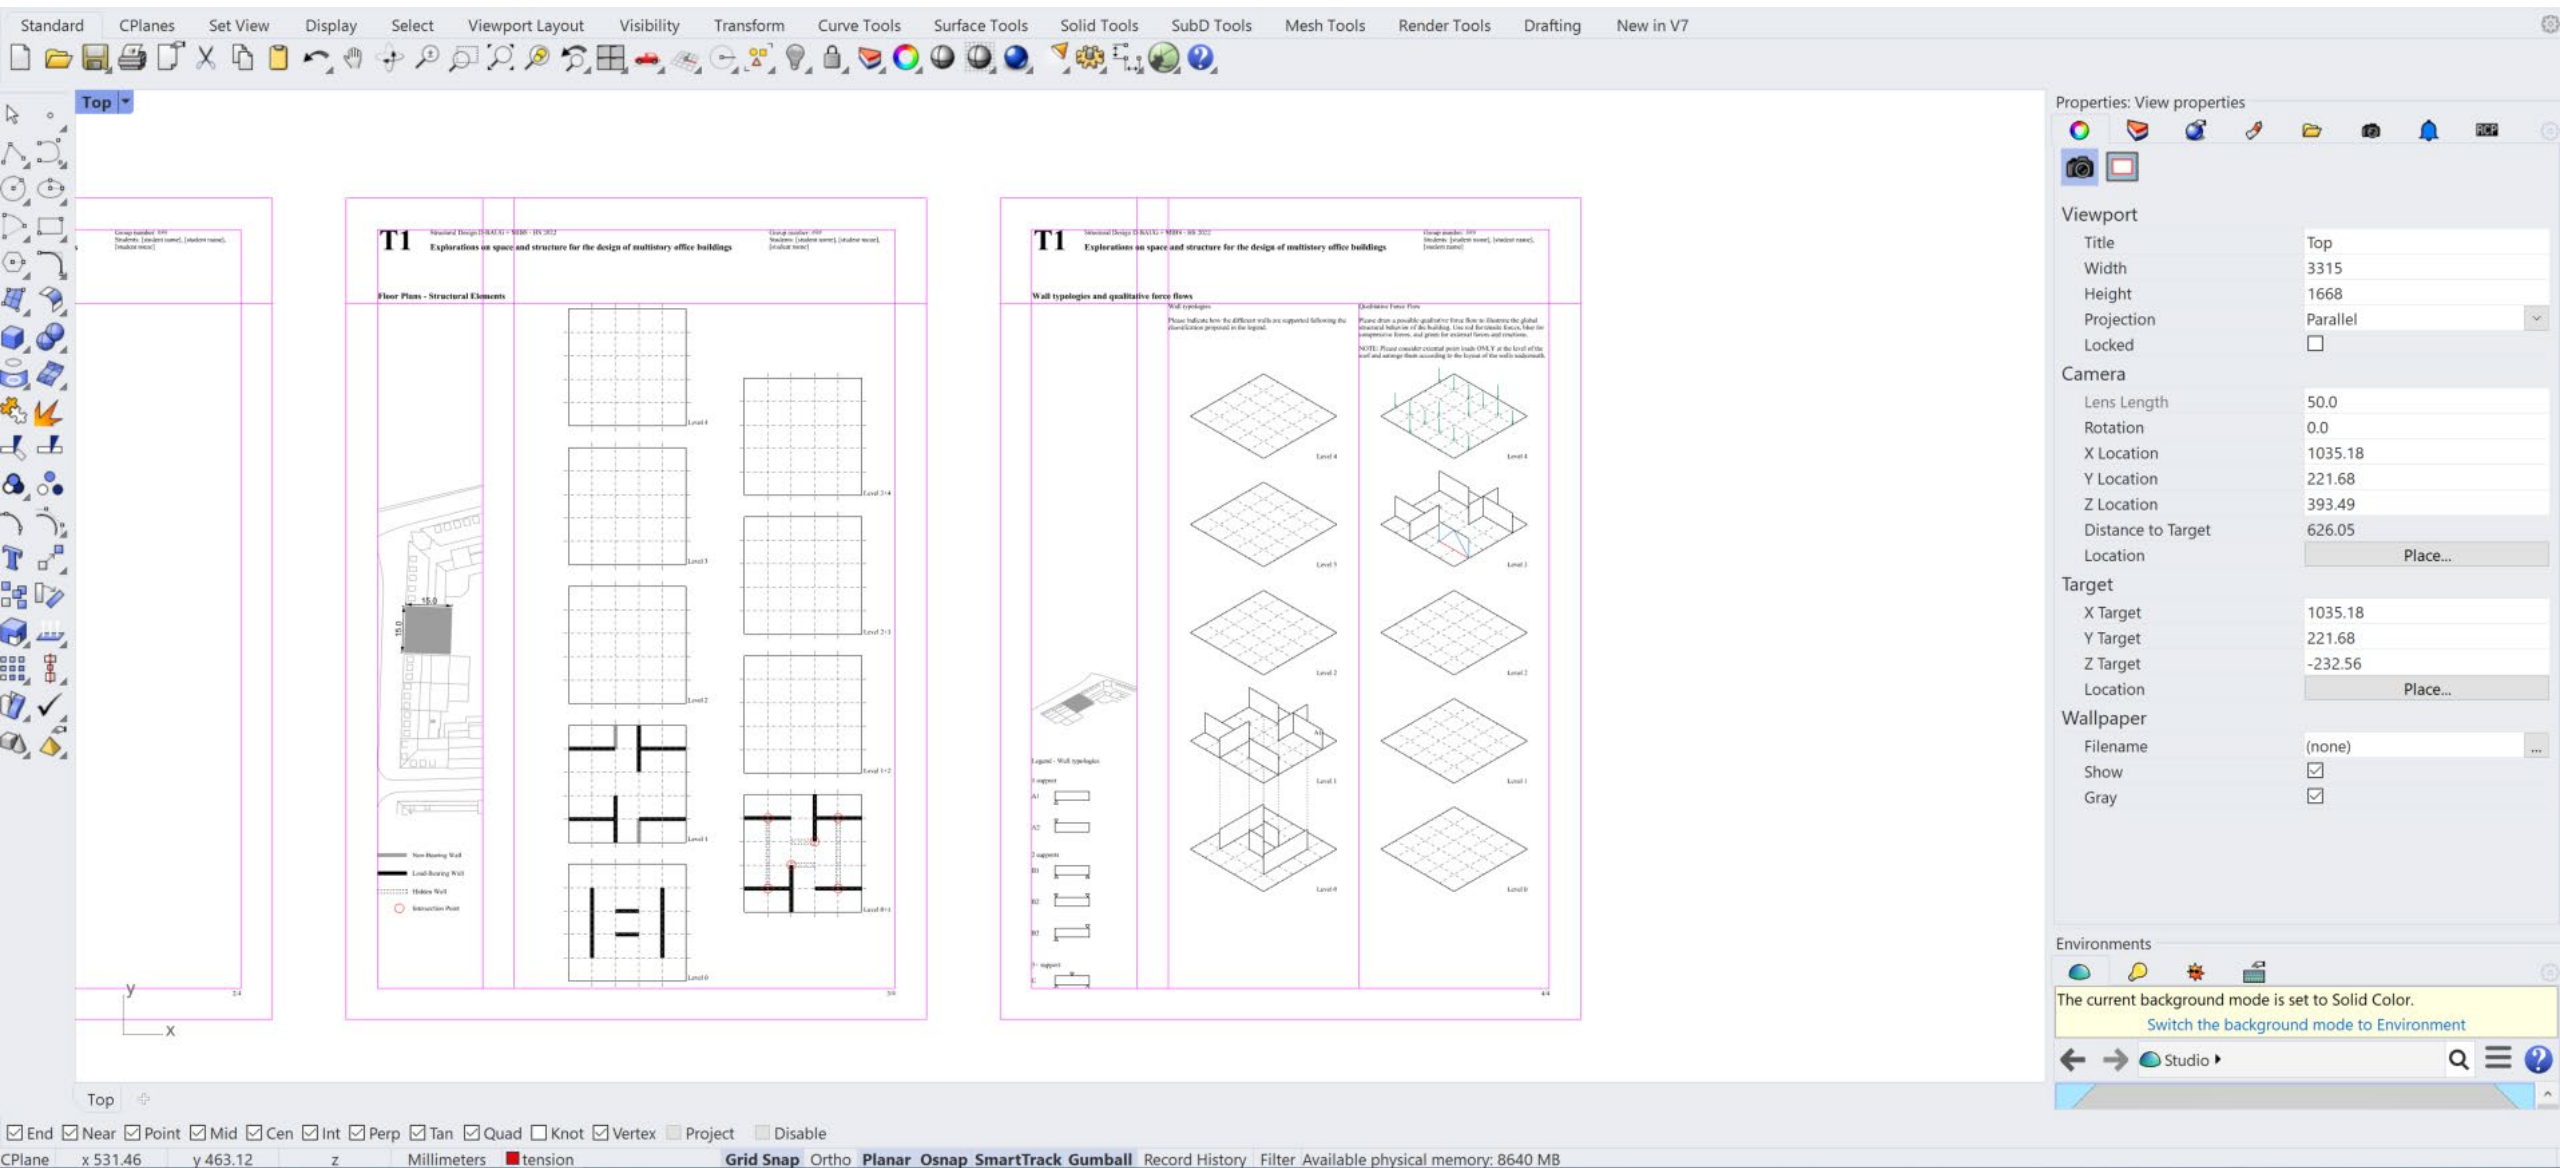

Please make sure you place each element of the drawing in the correct layer.

Task 1 – How to use the Rhino template

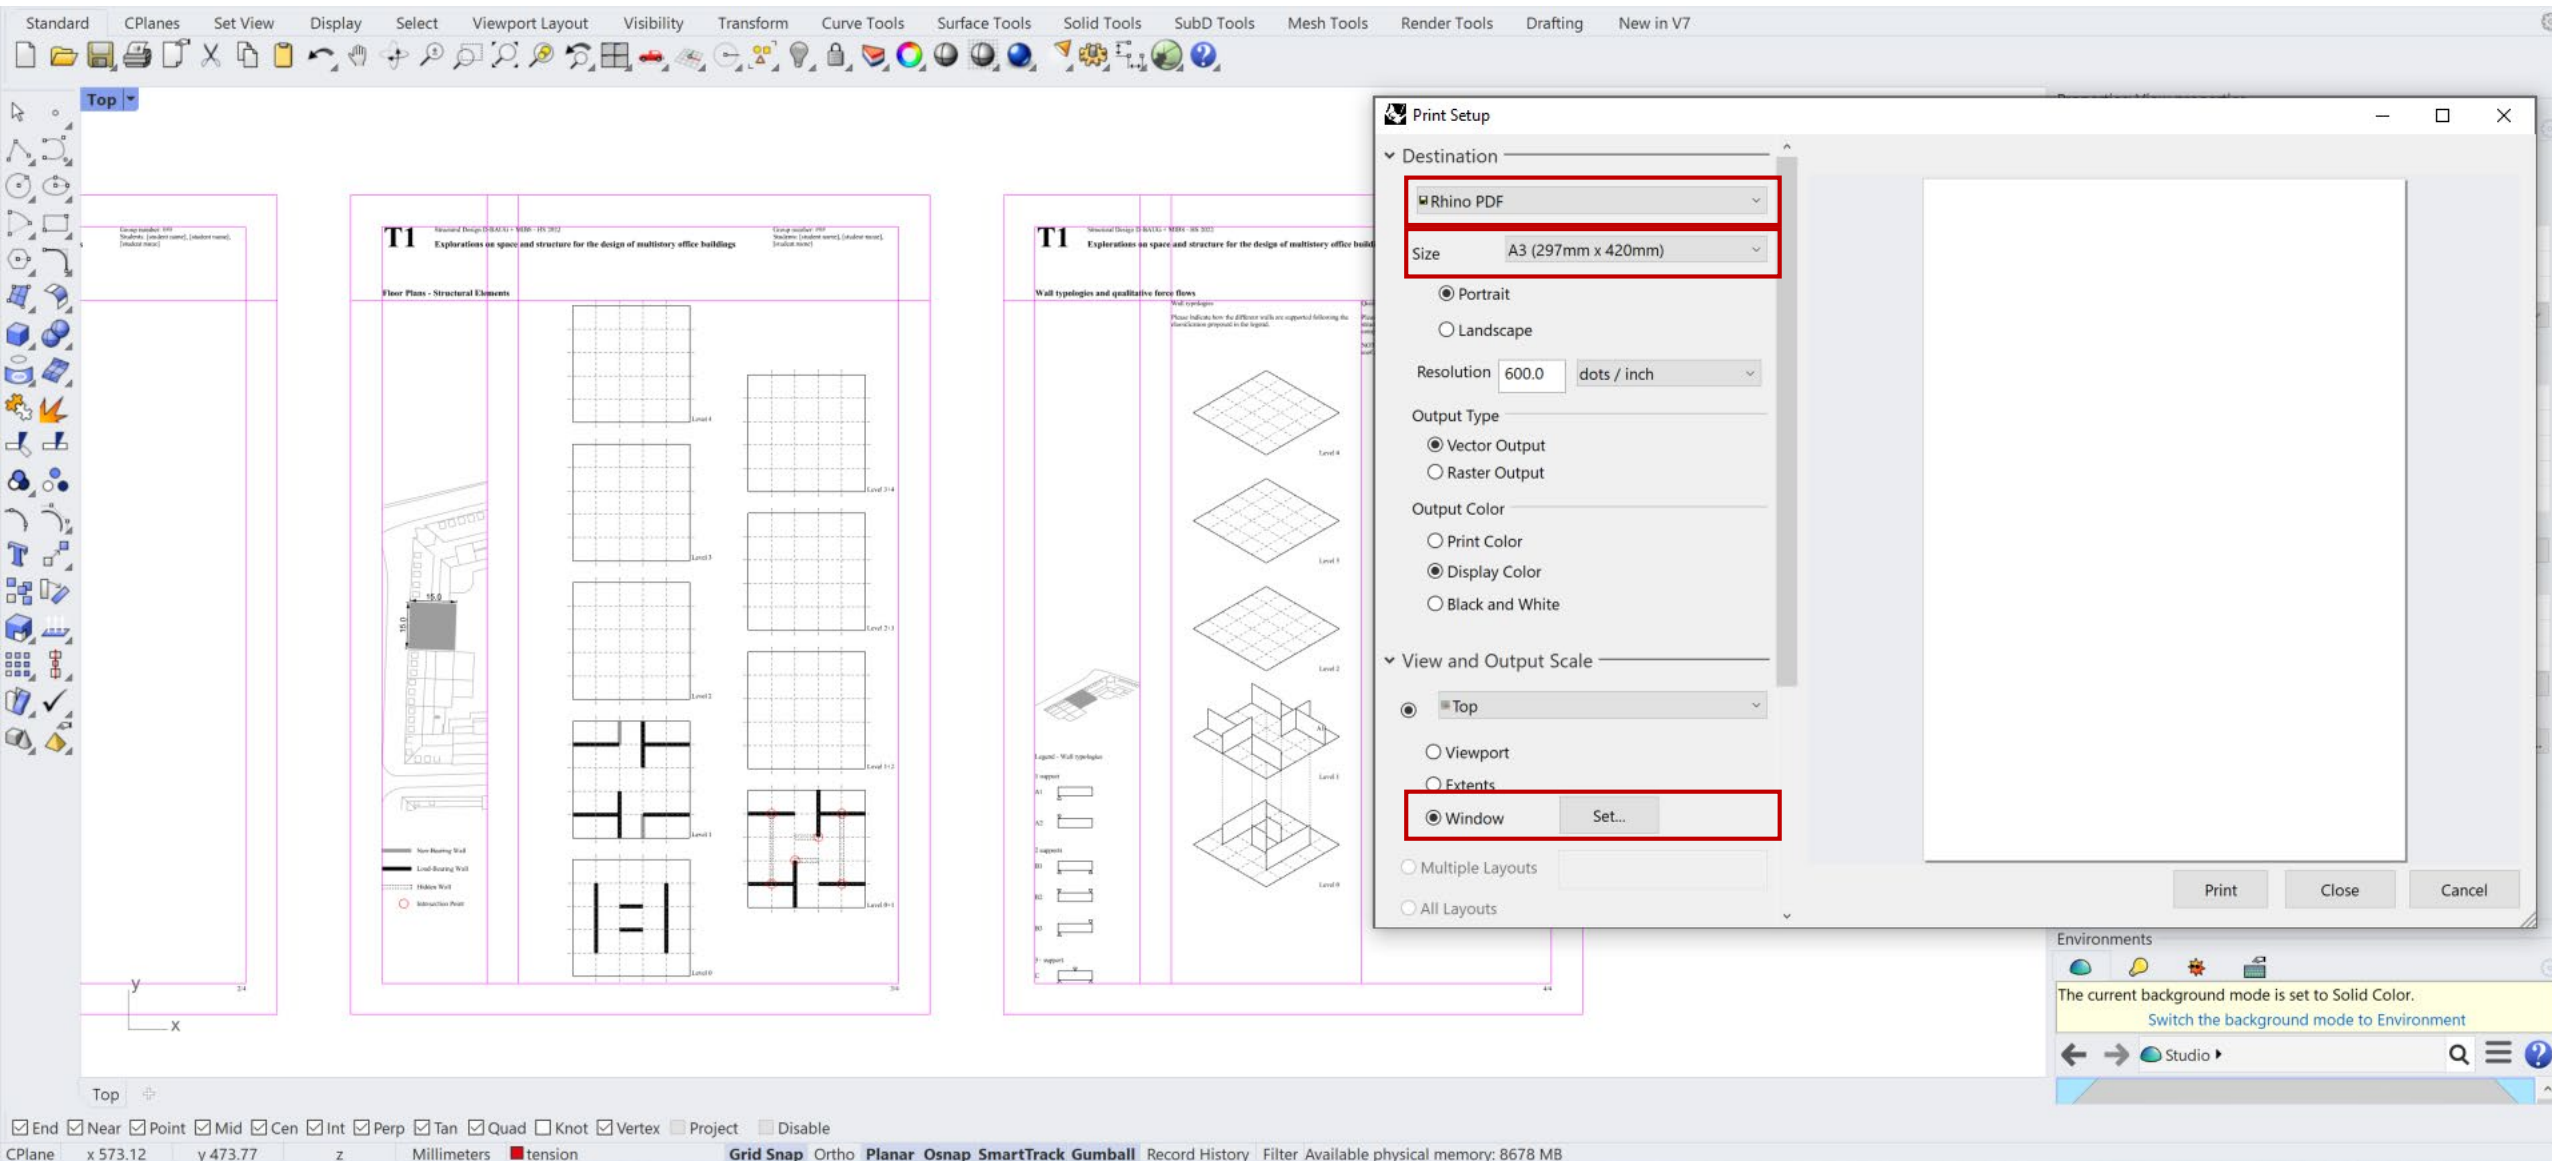

You can check which layer an element belongs to by using the Object Properties panel

Task 1 – How to use the Rhino template

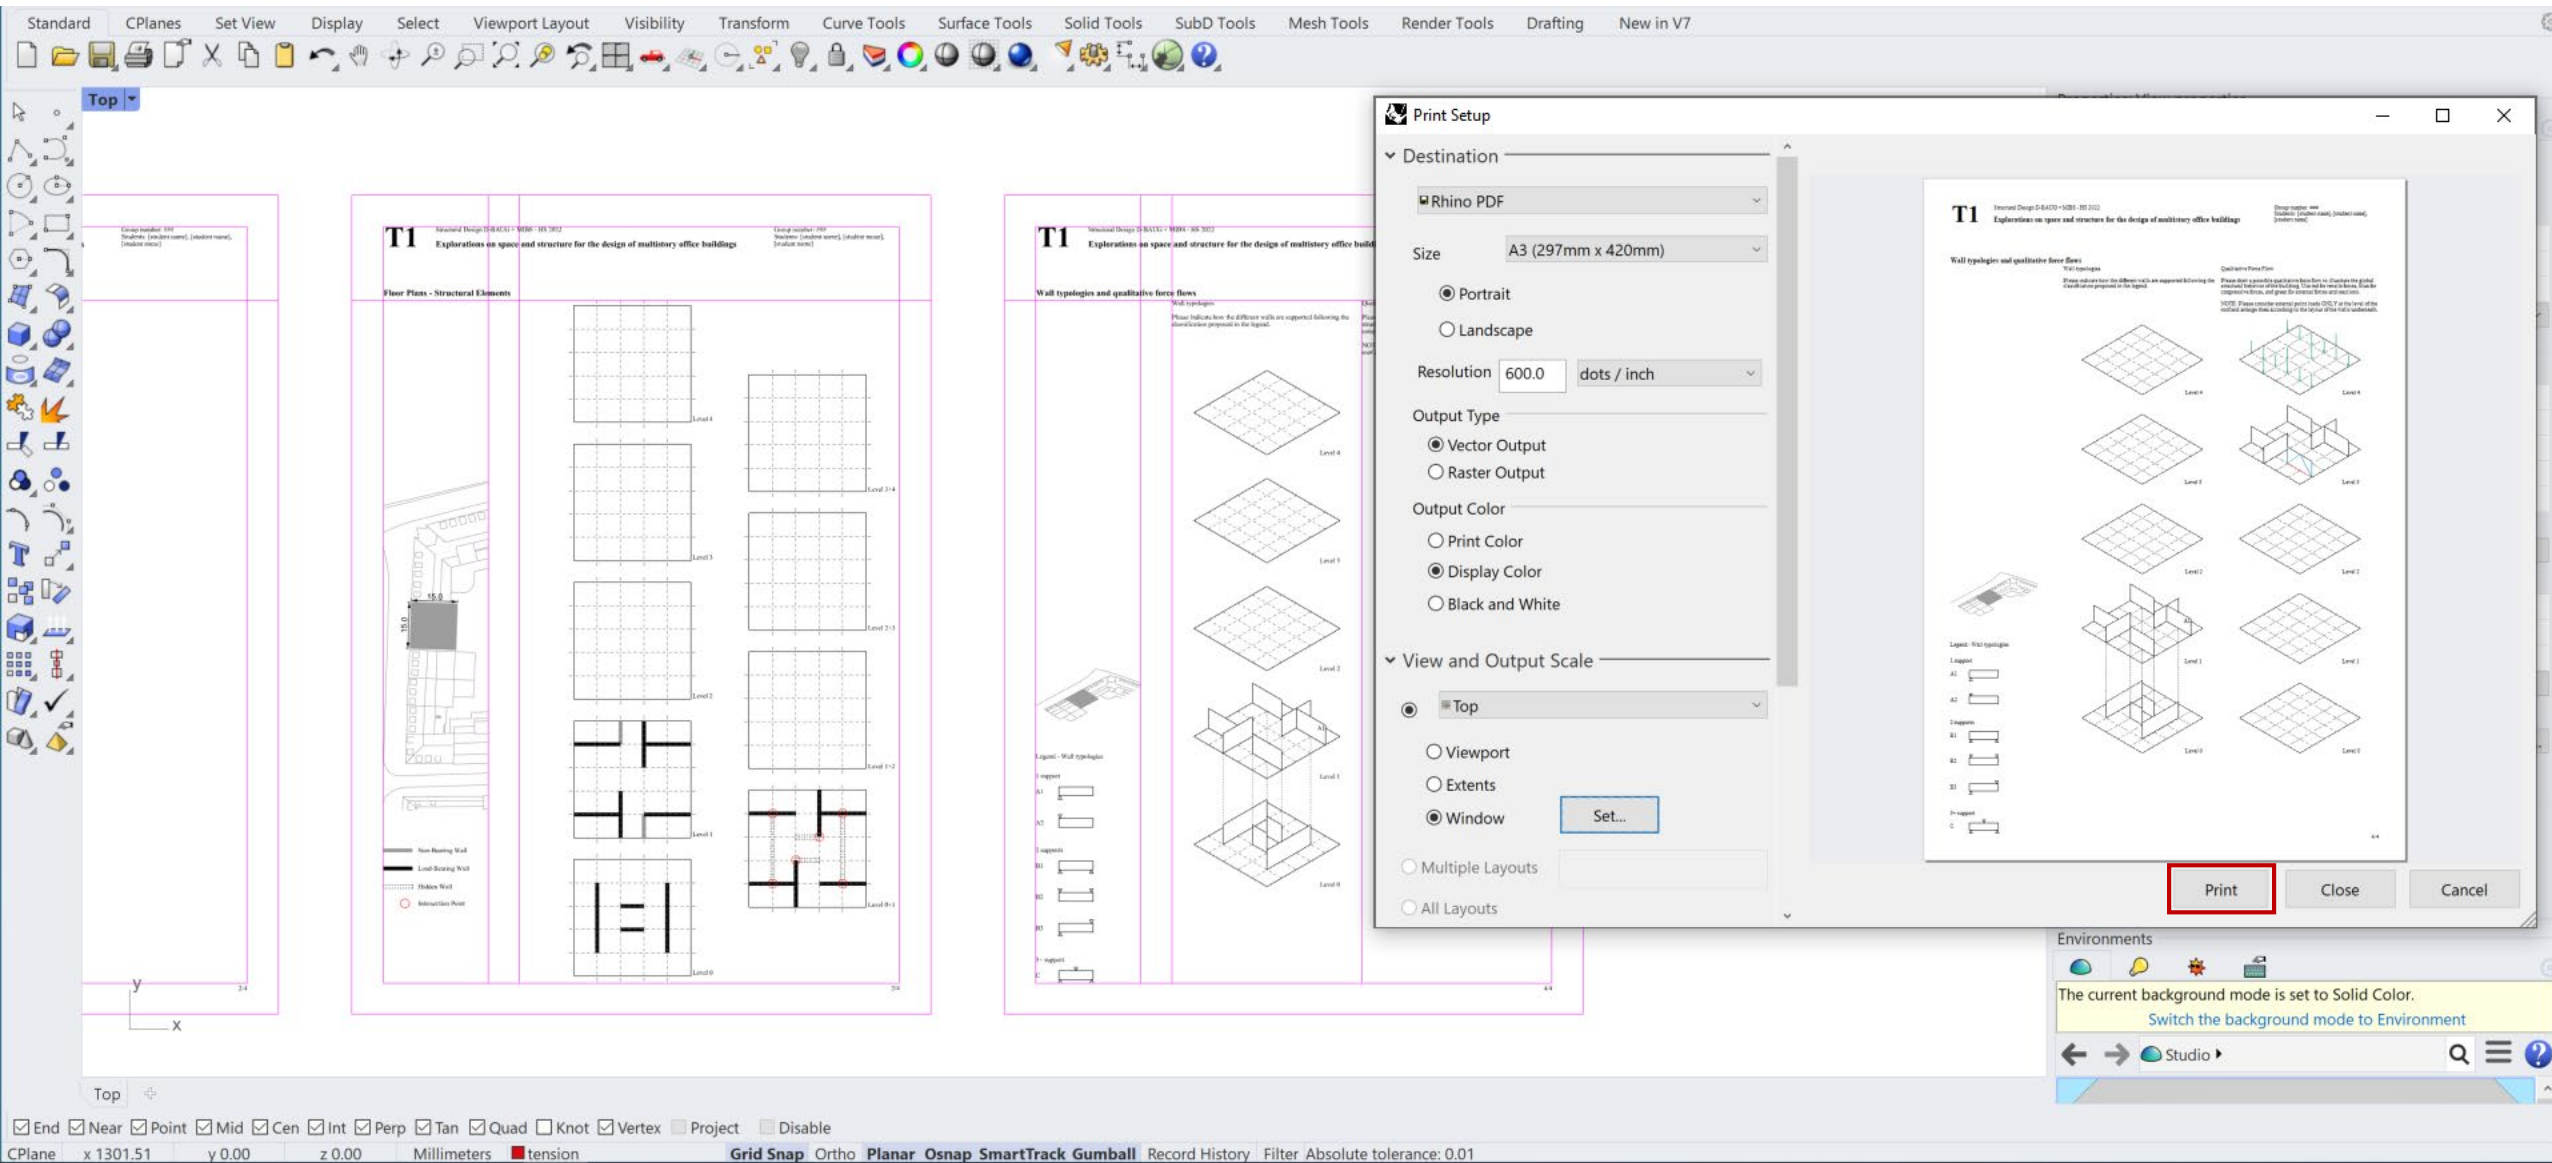

Once the drawings are complete and all the objects are in the correct layer, you can print PDF files from Rhino

Task 1 – How to use the Rhino template

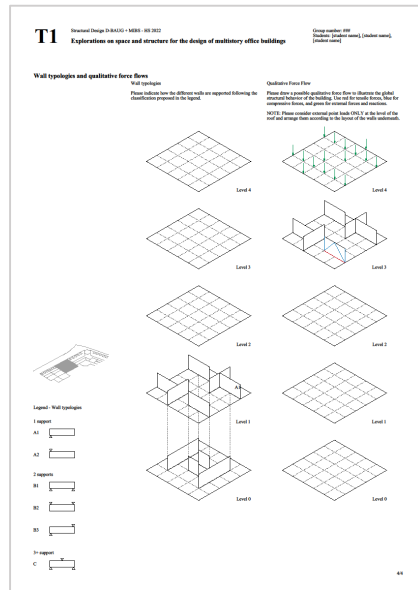

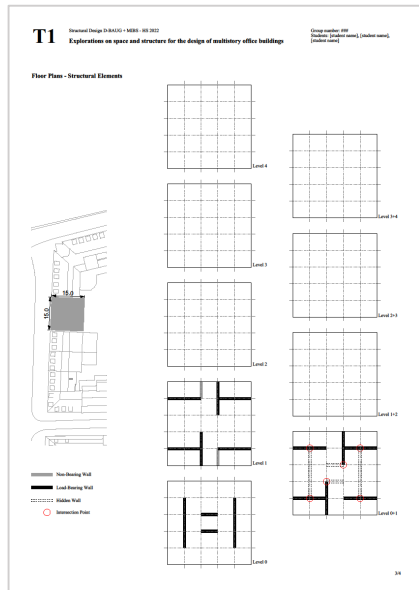

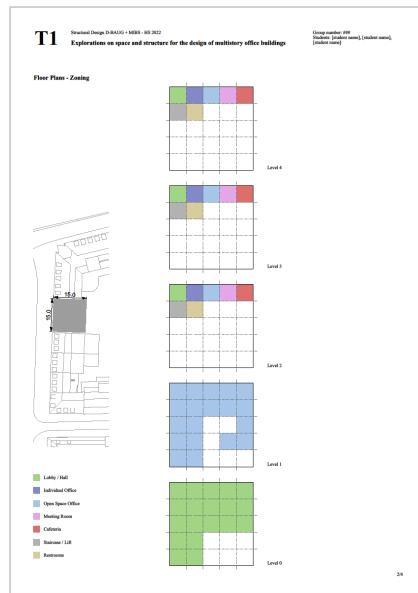

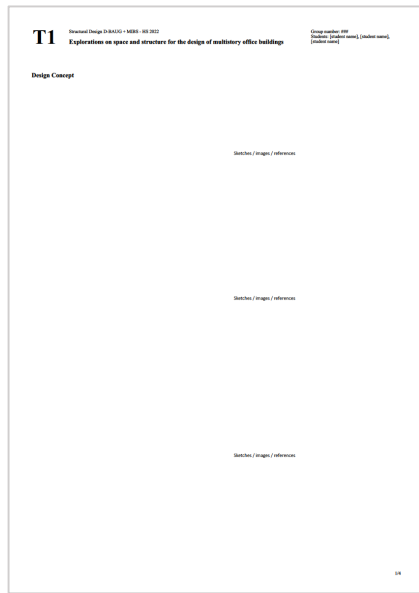

Type “Print” (Ctrl+P) > Select Rhino PDF as a printer > Select A3 size > Set the area to print

Task 1 – How to use the Rhino template

Save your file
